#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miller et al. (Miller) (US 5,327,248) in view of Silverbrook (US 6,476,863).

With regard to claims 1 and 3, Miller discloses a photographic print processing method, comprising the steps of: displaying a plurality of images arranged in a two-dimensional array on a display screen wherein images arranged at least in a one-dimensional direction in succession among said plurality of images are images processed states of which are gradually changed in at least one attribute of image processing (col 4, line 60 – col 5, line 2)

Miller does not specifically teach performing image verification based on the thus or displayed plurality of images.

Silverbrook discloses performing image verification based on the thus or displayed plurality of images (col 14, lines 45-52).

Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Miller to include performing image verification based on the thus or displayed plurality of images as taught by Silverbrook. It would have been obvious to one of ordinary skill in the art at the time of the invention to have

modified Miller by the teaching of Silverbrook to ensure verification of the image as taught by Silverbrook in col 14, lines 45-52.

With regard to claims 2 and 4, Miller also discloses said at least one attribute has a plurality of attributes of the image processing, and wherein said plurality of images displayed in the two-dimensional array are arranged in each one-dimensional direction in respect to two attributes selected arbitrarily from the plurality of attributes (col 4, line 60 – col 5, line 2).

The limitations of claims 5-6 are addressed above.

***Response to Arguments***

2. Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection,
